mezora

Know what your MUSD is already committed to.

Bills. Cash commitments. Verified payments.

Mezo Testnet prototype / Track 2: Access and Distribution

mezora.vercel.app

A wallet balance is only part of the picture.

Small teams need to know what is spendable before the next bill arrives.

01	**Bills compete for the same cash**	A balance does not separate tomorrow’s commitments from today’s free funds.
02	**A wrong recipient is expensive**	Duplicates and changed payment details need review before signing.
03	**A hash needs business context**	Payments and incoming transfers must connect to the right bill.

From a bill to cash you can account for.

Each payment keeps its amount, recipient and committed terms connected.

1

Review

Check the bill and recipient.

2

Reserve

Commit MUSD to the bill.

3

Approve

Review the exact action.

4

Reconcile

Verify the chain receipt.

Reservations are owner-cancelable cash commitments, not vendor escrow.

Plan the business around its payments.

Cash planning and review sit alongside the wallet actions.

See the next 30 days

Bills, operating buffer and saved cash scenarios help expose shortfalls.

Check before money moves

Duplicate invoice, recipient-change and budget checks support review.

Keep the supporting records

Receivables, reviewed document drafts, CSV imports and statements.

Recurring schedules create drafts. Recommendations are deterministic. Payments still require signatures.

Two approvals. One verified MUSD payment.

A separate V2 contract enforces owner + reviewer signatures on chain.

1.00

MUSD sent to the configured recipient

Mezo Testnet · block 16355664

Fund	1 MUSD transferred into V2
Reserve	Both signers approved the commitment
Pay	Both signers approved a separate payment

Main workspace stays on V1. No migration occurred. V2 signers are immutable.

Connect cash decisions to debt decisions.

Read a Mezo Trove and review repayment within protocol debt constraints.

1 MUSD

withdrawn from treasury
to the owner wallet

then

0.5 MUSD

repaid from the borrower wallet
with a separate signature

Two transactions, two receipts. The unused 0.5 MUSD remains in the owner wallet.

A working prototype with inspectable evidence.

Hosted app, public source and confirmed testnet payment and repayment flows.

Next	**Weeks 1–2**	Observed user tests and approval UX
	Weeks 3–4	General V2 bill integration and recovery design
	After security review	Limited pilot and mainnet readiness assessment
